

# Scratch 2 to Scratch 3: Setting Colours

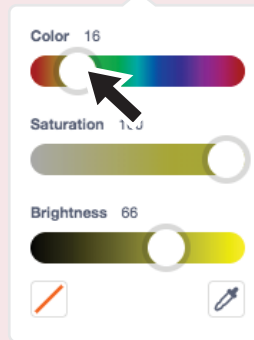

Scratch 3 has lots of great new features. But quite a few things have changed. Let's look at how you set colours.

## Setting Colours

Scratch 2 had a simple palette to pick colours.

Scratch 3 has replaced that with a more powerful but fiddly set of sliders.

Moving the sliders around gives 1 million colours! But finding the one you want can be tricky.

## Specific Colours

Use the values below to make a basic colour, then adjust the sliders and experiment.
